

I respectfully request that the FCC Reject the NAB petition 04-160.
I support the position that satellite radio should be allowed to broadcast traffic and weather for local areas nationally. This is providing a public service that is not matched by normal radio stations. I live in NYC but frequently travel up and down the East coast. While I know where some of the local stations are on the FM dial, I can never find the useful information for Boston or Wash. D.C.

Thank You

Robert Camporeale
